## **DETAILED ACTION**

1. Claims 4-10 are pending in this application.

### ***Terminal Disclaimer***

2. The terminal disclaimer filed on 5/21/04 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US 5958795 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### ***Response to Amendment***

3. The 35 USC 102 and 103 rejections over Gocho (5498565) have been withdrawn in response to the applicant's amendments.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 4-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Varian (5880007).

6. Varian discloses a planarization method in semiconductor manufacturing. Substrate 101 includes narrow (small) active regions 110 and wide (large) active regions 112. A (etch) stop layer 140 such as nitride is provided (col.3, 8-35). Space

130 (trench) is formed between the active regions (col.3, 49-52). Non-conformal layer 160 comprising HDP-CVD oxide is formed on the surface of the substrate filling the trench (col.3, 53-67). Sacrificial device layer 170 is formed over layer 160 and is planarized selective to oxide (thereby forming a partial reverse active mask covering an edge part of the large active region and on the small active regions). See col.4, 41-58 and fig.1D. An anisotropic etch is performed using the sacrificial or poly layer 170 to remove the exposed oxide material. The nitride layer serves as an etch stop (col.4, 59-65). Fig. 1F illustrates oxide material removed in a rectangular-profiles portion on the central part of the large active region, but remaining on an edge part of the large active region and on the small active region. The remaining oxide is planarized to the same level as etch stop layer 140 using CMP. See col.5, 1-11 and the fig.1A-1G.

***Response to Arguments***

7. Applicant's arguments with respect to claims 4-10 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
